Summary

Senior Cloud & Platform Support Engineer with 10 years' experience troubleshooting production SaaS platforms and distributed cloud systems in mission-critical environments. Experienced in incident response, observability, and reliability engineering across large-scale systems (AWS, VMware, Linux), including environments exceeding 100,000 VMs. Proven ability to diagnose complex failures, lead incident resolution, and improve operational workflows through scripting and automation while partnering closely with engineering teams to improve platform reliability.

PROFESSIONAL EXPERIENCE

Technical Support Engineer | HCLTech (Broadcom) | *Remote* Aug 2024 - Nov 2025

- Resolved 200+ production incidents across enterprise cloud environments, supporting virtualisation, compute, and infrastructure services while maintaining 90% first-contact resolution.
- Managed 30–40 concurrent customer cases monthly, prioritising high-impact issues and reducing escalations through structured troubleshooting and clear stakeholder communication.
- Delivered internal knowledge sessions and improved team documentation workflows using Jira, Wolken, and Confluence, strengthening technical ramp-up across the support team.
- Designed and deployed a custom Tampermonkey automation script to streamline ITSM workflows, increasing case closure efficiency by 20% and reducing repetitive manual steps.
- Participated in high-severity incident bridges, contributing to root cause analysis and post-incident documentation to prevent recurrence.

Technical Support Engineer | ServiceNow | *Dublin* | *Hybrid* Sep 2023 - March 2024

- Resolved 40+ monthly enterprise platform incidents across production environments, improving system performance by 20% through log analysis and observability tooling (Splunk, Grafana).
- Diagnosed complex full-stack issues spanning application (JavaScript) and database layers (MariaDB), reducing repeat incidents through structured root cause analysis.
- Investigated JVM memory leaks and semaphore exhaustion issues using heap dump analysis, contributing to improved system stability and faster resolution of critical cases.
- Contributed to automation tooling (Tampermonkey extension) to optimise internal support workflows, improving team efficiency and case handling speed.

Technical Support Engineer | ScienceLogic | *Cork* | *Remote* May 2021 - June 2023

- Acted as Tier 2 escalation point for the SL1 monitoring platform, resolving 50+ complex monthly cases across enterprise infrastructure and observability environments.
- Partnered with Engineering and R&D to diagnose and resolve 100+ high-priority production issues, contributing to bug fixes and product stability improvements.
- Identified root causes for recurring monitoring failures, reducing repeat incidents and improving alert reliability for enterprise customers.
- Designed and deployed a custom Salesforce plugin to streamline internal workflows, significantly improving case handling efficiency and support team productivity.

Systems Support Analyst | Wells Fargo | *Dublin* | *Hybrid* **July 2017 - April 2021**

- Supported large-scale virtualisation infrastructure spanning 100,000+ VMs and 5,000 ESXi hosts, maintaining 99.9% uptime across enterprise production systems.
- Monitored vSphere performance trends to proactively identify capacity risks and prevent system degradation.
- Executed 200+ BIOS and firmware upgrades across Dell and HP server estates, minimising downtime and improving hardware stability.
- Led structured hardware troubleshooting initiatives, reducing resolution times for infrastructure-related incidents.
- Participated in critical on-call rotations, responding to high-severity performance and availability incidents.

Technical Support Engineer | VMware | *Cork* | *Onsite* **April 2015 - June 2017**

- Managed 100+ monthly production support cases across enterprise vSphere environments, delivering rapid incident resolution and live system troubleshooting.
- Reduced average downtime by 30% through structured fault isolation and real-time collaboration during production-impacting incidents.
- Resolved 50+ monthly storage-related issues, including SAN connectivity, datastore performance, and LUN provisioning/resizing.
- Performed advanced Linux log analysis to identify root causes, reducing resolution times by 25% and preventing repeat incidents.

EDUCATION

BSc in Computer Science - Technological University Dublin **Sept 2010 - May 2014**

CERTIFICATES & PROFESSIONAL TRAINING

AWS Certified Solutions Architect | VMware Certified Professional | Microsoft Certified Professional | CCENT Certification

TECHNOLOGY SKILLS

Cloud & Infrastructure: AWS, VMware vSphere/ESXi, VMC, Docker, Linux
Observability & Monitoring: Splunk, Grafana, ScienceLogic SL1, ServiceNow
Programming & Automation: Python, Java, SQL (MySQL/MariaDB), Linux Shell, Git/GitHub, API integrations
Operational Practices: Incident Response, Root Cause Analysis, Reliability Engineering, Automation, Troubleshooting

AREAS OF EXPERTISE

Troubleshooting | Incident Response | Cloud Infrastructure | Distributed Systems | Observability | Automation | Log Analysis | Reliability Engineering

HOBBIES AND INTERESTS

5-a-Side Football | Gaming | Reading | Coding | Golf | Accordion
